

Highcon Updates

July 29, 2015

We thought you might be interested in some of Highcon's latest updates - what we've been up to over the past couple of months.

Hot off the presses!

We just got word that we received the prestigious 2015 InterTech™ Technology Award from the Printing Industries of America for our pioneering Highcon Euclid digital finishing technology! So nice to be recognized! Read more about it. 2015 InterTech Logo_lores

Highcon Euclid II S for an end-to-end digital workflow

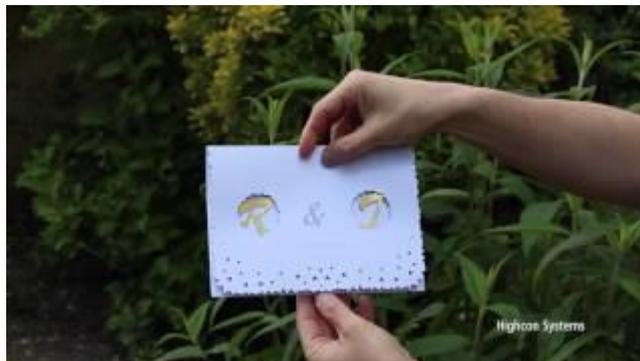

The latest in the Highcon Euclid II series of digital cutting and creasing machines is the Euclid II S. This machine has been engineered to provide all the benefits of the Euclid II series, for labels, cartonboard and microflute sheets with a maximum size of 530 x 760mm (21 x 30 in.)

The Euclid II S offers customers the efficiency of an end to end digital solution and can be upgraded to a full Highcon Euclid II or II+.

Highcon has been working hard with designers to put the Highcon Euclid through its paces and come up with some really exciting designs.

Peter Dahmen, paper artist extraordinaire designed these two exciting products for us. Click on the images to see the short videos.

"If customers are paying so much for a car, don't you think the keys should be packed in

[See how Peter Dahmen turns this simple key into a luxury experience with the Highcon Euclid Car Key](#)

And if you're producing wedding products - doubtless your customers are determined that this wedding will be the ultimate in design and taste?

[Take a look at this amazing 3D wedding invitation and RSVP card also designed by Peter Dahmen and produced on the Highcon Euclid.](#)

Both these exciting products were produced on the Highcon Euclid digital cutting and creasing solution.

Looking forward to telling you more about the Highcon Euclid and the great value it adds to your printed products in our next update.
