

Highcon Update

October 21st, 2015

September was a really busy month for Highcon with Graph Expo providing the highlight.

We were proud to be awarded the Must See'Ems Best of Category Award in the Postpress and In-line Finishing category for the Highcon Euclid II+ digital cutting and creasing machine.

I was pleased to take part in the video too - click on the image to view. We also received our GATF InterTech Award at a special gala event.

At the Highcon booth the emphasis was on the benefits the Highcon Euclid solution brings to our customers. We showcased amazing customer job and Bill Lorenz, VP Operations of Boutwell Owens was on the booth talking to customers about their experience with the machine. Peter Dahmen gave three presentations a day to visitors talking about how this digital technology has transformed his ability to actually produce his creative designs.

We also introduced the Highcon Axis web-to-pack solution, in cooperation with XMPie and Esko, and the Highcon Euclid IIS - the latest in the series, engineered to provide all the benefits of the Euclid II series, for smaller digital printing format.(maximum sheet size 21 x 30 in)
